Error for the messages:	24
Error sending friend request to an already friend:	24
Success control:	25
You accept a friend request:	25
You ignore a friend request:	25

Requirements:

- PHP >= 7.1
- Composer
- XAMPP

Deploy configuration:

1. First you can find the code of the application on GitHub: [Message-App](#). Clone this repo on your machine, if you want to deploy it with XAMPP, you can clone directly on your htdocs folder: C:\xampp\htdocs.
2. For the connection to the database, you need to change the **config.php** on the project with your parameters.

```
// Update the details below with your MySQL details
define('DBUSER', 'root');
define('DBPWD', 'root');
define('DBHOST', 'localhost');
define('DBNAME', 'chatapp');
```

3. To create the database on your local machine you need to run two different scripts, one for the creation of the database(Database-ChatApp.sql) and the other for inserting some initial data to see on the application(Initial Data.sql) . You can find those files in the directory sql on the project.

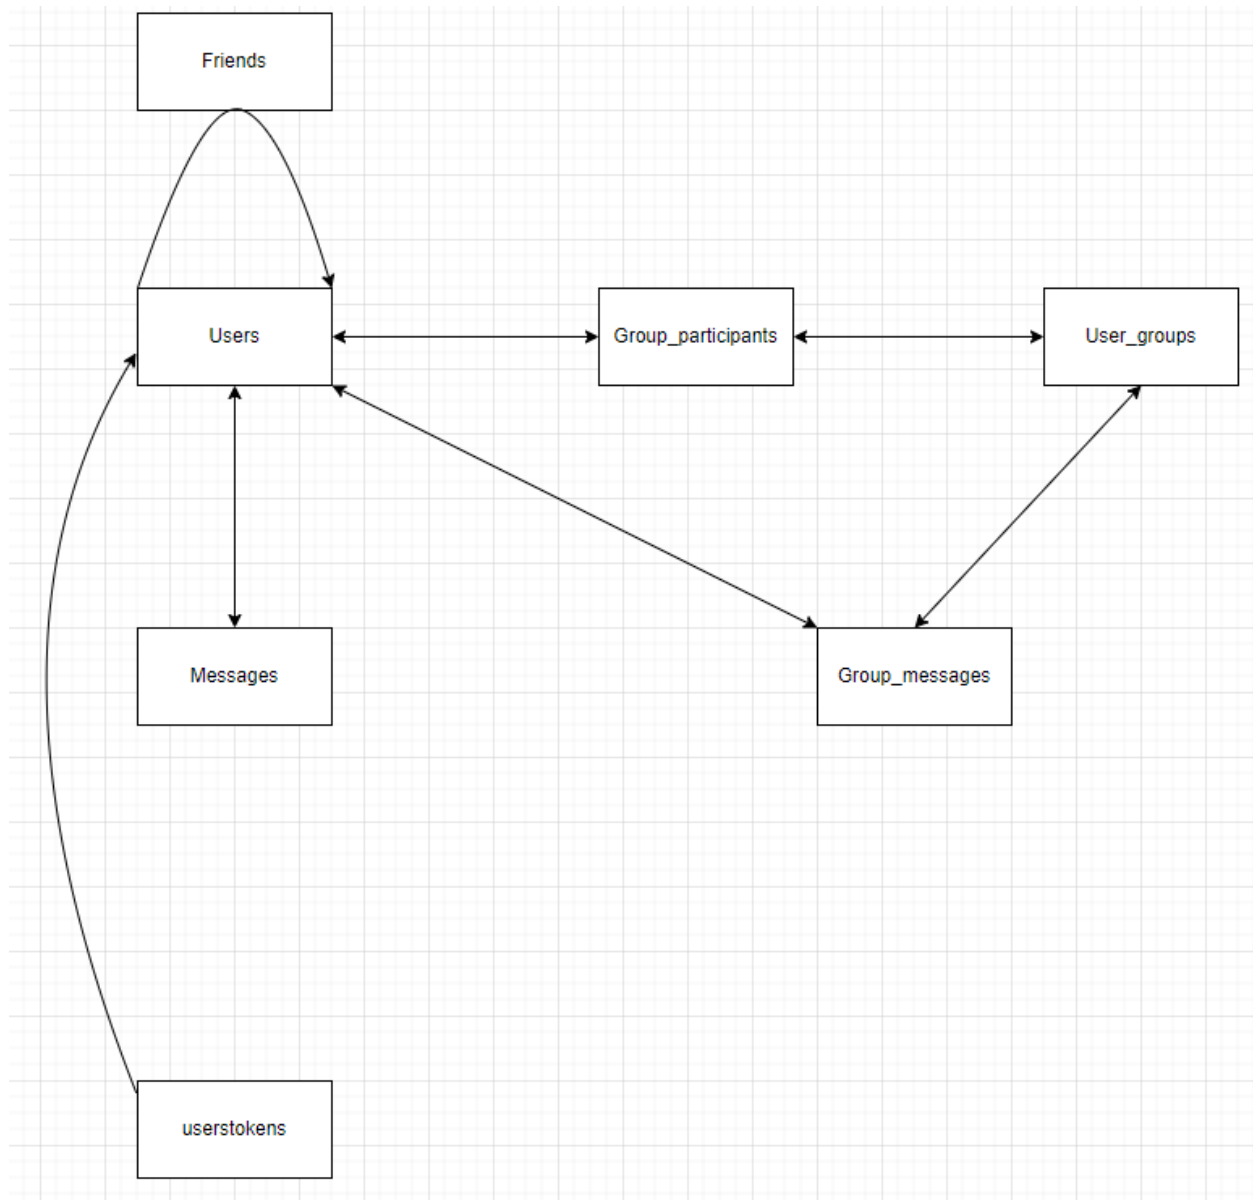

Test credentials:

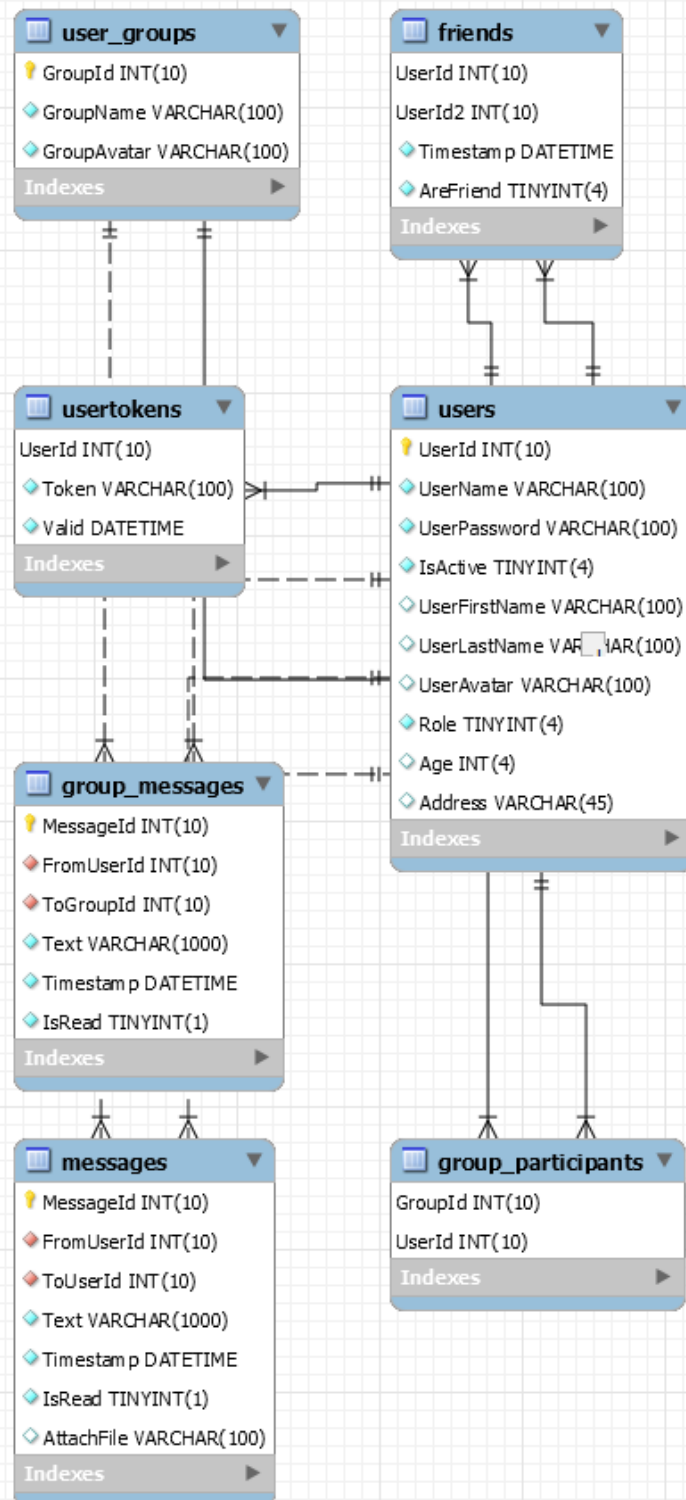

Users :

-
- Admin: luis@gmail.com
 - User: pepe@gmail.com, jhon@gmail.com, alex@gmail.com

Password for all the users and admin: 1234

Database schema:

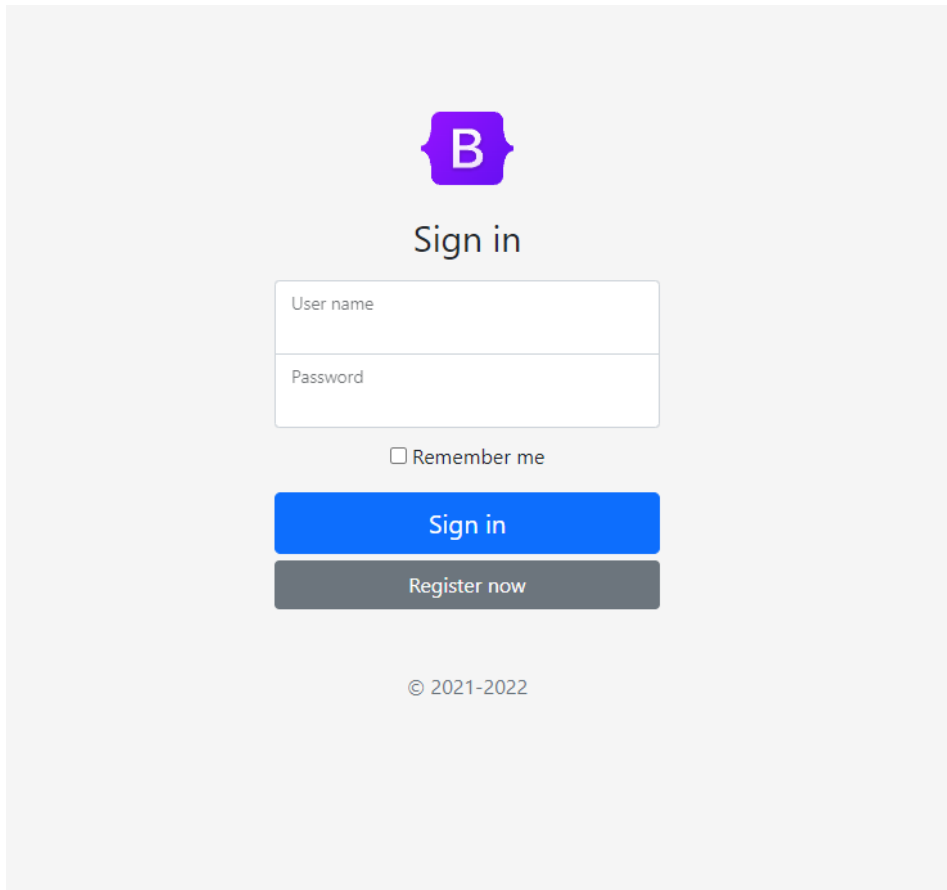

Features implemented:

Basic functionality:

1. Access:

A sign-in form on a light gray background. At the top center is a purple logo with a white letter 'B'. Below the logo is the text 'Sign in'. Underneath is a form with two input fields: 'User name' and 'Password'. Below the input fields is a checkbox labeled 'Remember me'. There are two buttons: a blue 'Sign in' button and a gray 'Register now' button. At the bottom center is the copyright text '© 2021-2022'.

Hola amigos, habeis terminado
la practica de chat?

Error control:

Error example:

- Get the error:

```
//Error handling
if (isset($_GET["messageError"])) {
    $messageError = $_GET["messageError"];
}
```

- Show the error on the page:

```
<?php if (isset($messageError)) {
    template_error_inpage('Error', $messageError);
} ?>
<?php if (isset($messageSuccess)) {
    template_success_inpage('Success', $messageSuccess);
} ?>
```

- Example error(login):

```
//Verify the hashed password
if (password_verify($_POST["password"], $result['UserPassword'])) {
    //Get the user role
    if ($result['Role'] == 0) {
        $_SESSION["userrole"] = USERROLE;
        header('location: index.php?page=home');
    } else {
        $_SESSION["userrole"] = ADMINROLE;
        header('location: index.php?page=admin-zone');
    }
} else {
    $messageError = "The user or password are incorrect, please verify your information";
    header('location: index.php?page=login&messageError=' . $messageError);
}
}
```
